Yamil Pedroso

Creative Full Stack Developer

I am Yamil a passionate full stack web and mobile app developer, with experience in web application development: Creative, focused on vision, product, people, and fulfilling customer needs.

In 2020, I completed an intensive full stack BootCamp at Constructor Academy. In 2022, I completed a second intensive full stack BootCamp, this time at Le Wagon. Since my first BootCamp I have been working intensively with programming languages and have implemented my own projects.

In general I have a lot of experience and a good eye for colors and picture contents. I am good at listening to people, realizing their needs, and implementing them into my work. I can express myself in different languages and designate myself as a team player that learns fast.

As an artist, I love to create and explore new forms of expression. I use a variety of techniques and media, such as drawing, painting, and digital media, to bring my ideas to life.
